

Sistemi informativi in evoluzione al servizio delle emergenze non epidemiche

Luigi Possenti

Experience on the field

L'Aquila 2009 - Central Italy 2016-2017

IUVENE, the National Reference Centre for Urban Hygiene and Non-Epidemic Emergencies

become operational Pescara

... with the support of the CSN ...

The CSN is a department of the "Information Technology Laboratory" (IT Lab) of IZSAM.

Its main projects are Italian National Database of the Livestock Registry (BDN), and other Vet. Information Systems.

For all CSN's software applications, users can obtain a competent support calling the Help Desk via a toll free number 800 082280. The service is available from 8:00 to 20:00 from Monday to Friday and on Saturday from 8:00 to 14:00.

... GIS and other IZSAM structures

CSN staff works in close collaboration with other departments, especially:

- "Software Development" and "Telematics" (IT Lab)
- "Risk Analysis National Reference Centre",
 "Epidemiology", "Statistics and GIS" (in COVEPI Lab)

What they did to help emergency management

- Help Desk service
- Reports about farm and livestock in affected area
- Maps
- Data Forms to collect information from help desk and inspection activities
- Farm Search mobile App
- IUVENE Information system

Help Desk

 Thanks to the existent help desk, CSN was immediatly able to set up a dedicated Help Desk, in order to receive calls relating to public veterinary health and food safety issues, available to all citizens

 This service was active every day, including Sunday, from 8:00 to 20:00, accessible via a toll-free number and a dedicated e-mail address.

Reports about farms and livestock in affected area

- The CSN provided right away detailed reports on the state of the livestock in the affected areas, using Italian National Database of the Livestock Registry (BDN).
- These reports, provided to Interregional Technical Committee (CTI) involved in the management of the emergency, proved to be a very useful tool in planning the interventions to be carried out on the territory.

Data Forms to collect information from help desk and inspection

Standard Data Forms were defined and used during inspection activities in farms and other structures of veterinary interest, in order to collect data and information useful to manage crises.

Emergenza Sisma - Piano di controllo nei Campi Tenda

What they did to help emergency management

- Help Desk service
- Reports about farm and livestock in affected area
- Maps
- Data Forms to collect information from help desk and inspection activities
- Farm Search mobile App
- IUVENE Information system

Farm Search mobile App

A new application for mobile devices (smartphones and tablets) called "Farm

Search" (Cerca Azienda) has been developed It allows to search and visualize on map all geo-referenced farms in Umbria, Marche, Abruzzo and Lazio Regions, by direct access to the National Database of Livestock

Farm Search mobile App

By using Farm search, all official veterinarians

working in the areas involved in the seismic events was able to get quickly and effectively all farms to be visited, even if they were coming from other regions and so any knowledge of the territory in which they

What they do after emergencies

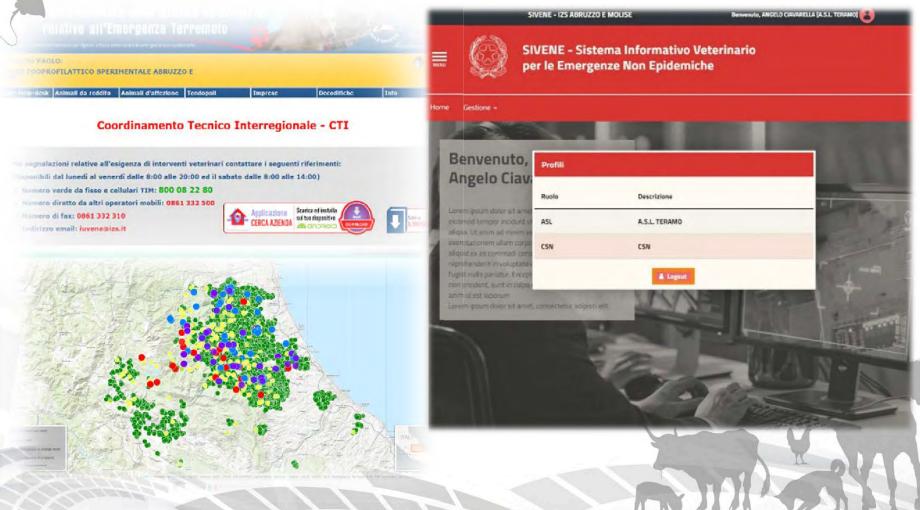

CSN, Statistics and GIS and IUVENE experts worked to project a new system, technologically more advanced, more flexible, designed to manage hazards of different types, on the entire national territory.

SIVENE: a new IUVENE IT System

IZSAM 02/15 RC - Sviluppo di un sistema informativo per la gestione delle attività veterinarie in corso di emergenze non en

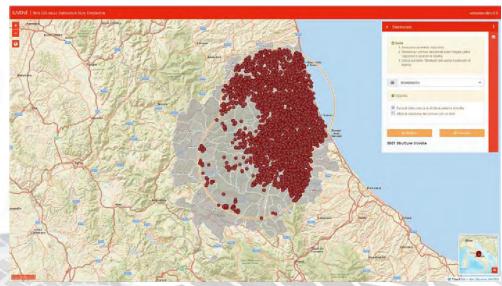

IZSAM G.CAPORALE TERAMO

veterinarie in corso di emergenze non epidemiche

SIVENE: a new IUVENE IT System

Thanks to the support of the Italian Ministry of Health, that has funded a research project, the IUVENE Information System has been upgraded and an innovative Veterinary Information System for Non-Epidemic Emergencies (SIVENE) is now available.

New Technologies

A NGULAR TypeScript

New tecnologies have been adopted:

Angular is an open source framework, built in TypeScript (a programming language), to make web applications working in different devices (PC, smartphone and tablet).

Building an Angular project with Bootstrap (a front-end component library) and HTML5 let applications be responsive, so web site is authomatically adapted depending from device.

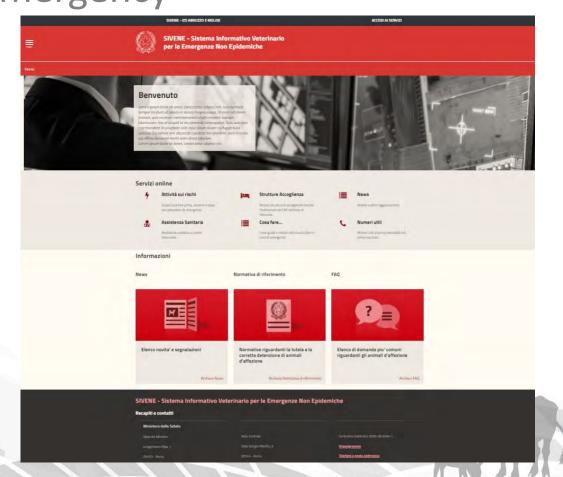

SIVENE: main topics

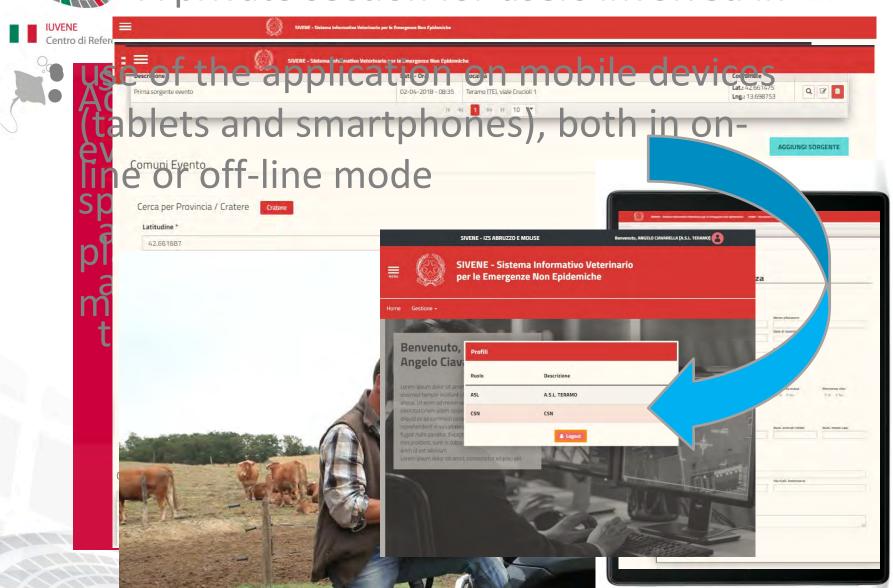

• A public web portal to inform all citizens and give them advice and news about emergency

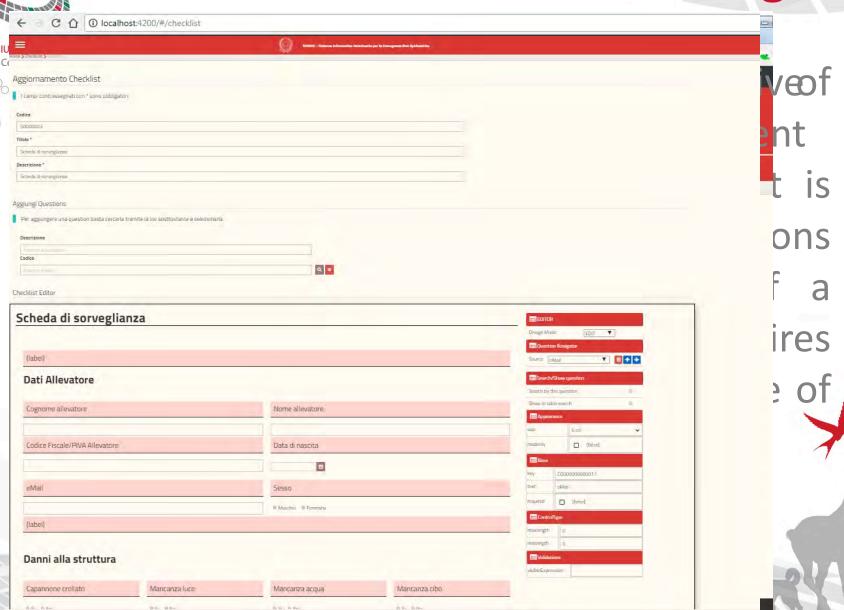

SIVENE: reserved area

A private section for users involved in

SIVENE engine

... to get an ad-hoc form for detailed check list for a specific event
