

BRI/IZS&M Microbial Diagnostic Microarray (MDM) database website

BRI microarray facility

Italy IZSA&M project (2007):

- Diagnostic microarray for the identification of *Brucella sp.*

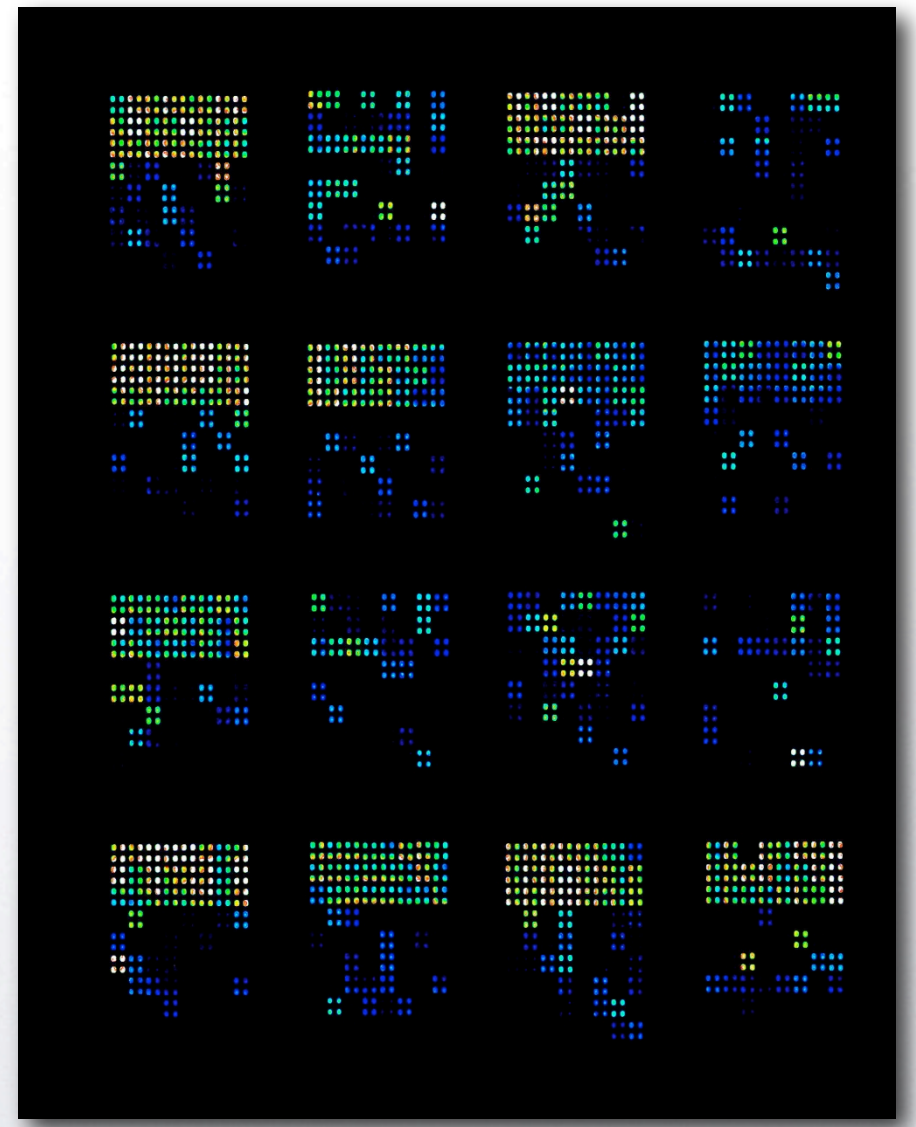

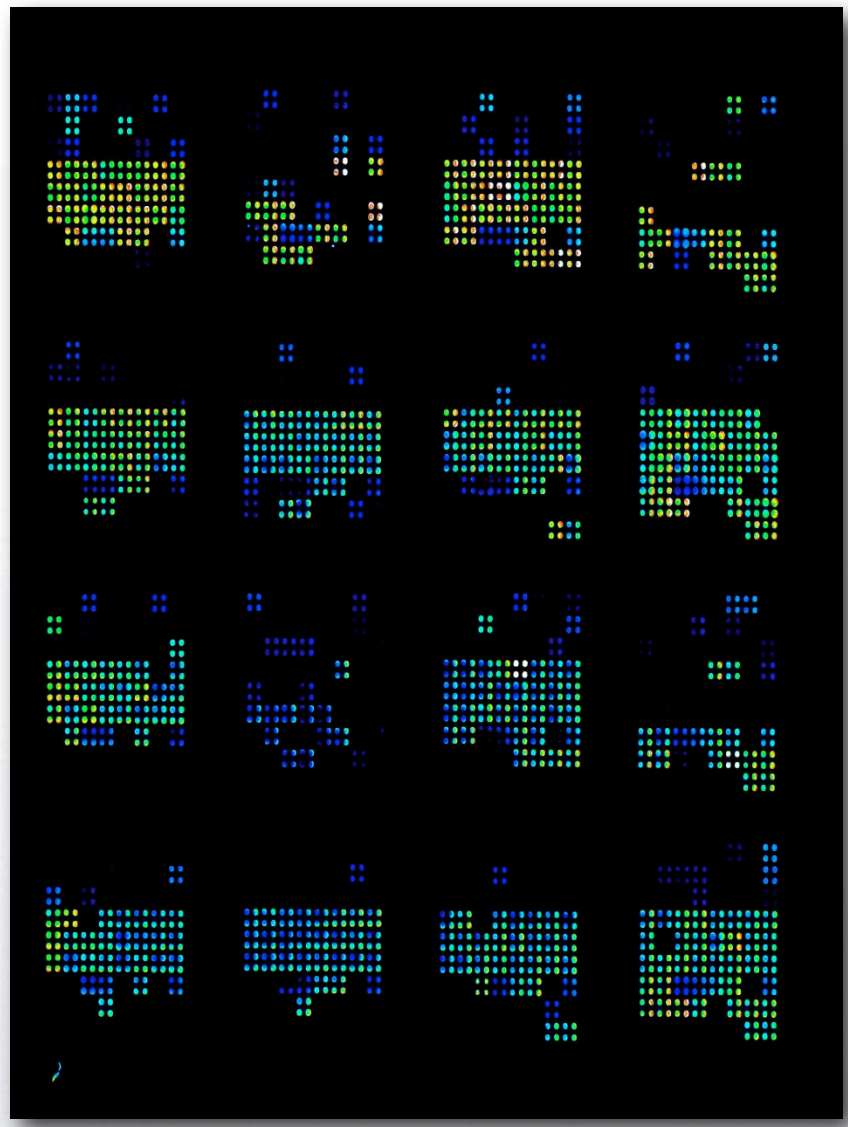

Goal; be able to identify other organisms that may cause abortions in animals or that may elicit an immunological response similar to those species.

- Diagnostic microarray for genetic characterisation of rabbits *E. coli* strains.

Virulence and antimicrobial resistance genes of *E. coli*.

BRI microarray facility

OPEN SOURCE CLUSTERING SOFTWARE

<http://bonsai.ims.u-tokyo.ac.jp/~mdehoon/software/cluster/software.htm>

OVERVIEW

SOFTWARE

PEOPLE

CONTACT

The open source clustering software available here contains clustering routines that can be used to analyze gene expression data. Routines for hierarchical (pairwise simple, complete, average, and centroid linkage) clustering, *k*-means and *k*-medians clustering, and 2D self-organizing maps are included. The routines are available in the form of a **C clustering library**, an **extension module to Python**, a **module to Perl**, as well as an enhanced version of **Cluster**, which was originally developed by **Michael Eisen** of **Berkeley Lab**. The C clustering library and the associated extension module for Python was released under the Python license. The Perl module was released under the Artistic License. Cluster 3.0 is covered by the **original Cluster/TreeView license**.

- Make this cluster **PUBLIC** to all users Yes.
 - ... OR ... Give access to group only.

Do you want to share your files/clusters with other users ?

- Each Microarray has a key file. There may be different versions (e.g 1.0 and 1.1) when more samples are added to the chips.
- Each coordinate in a QA-file is checked against the same coordinate in the key file.
- If the coordinate description of the key file doesn't match the description in the QA-file, we will check if it's a small error. The website will correct small errors in the QA-file, if possible.
- If more than 5 descriptions don't match (or can not be corrected), you are likely uploading a QA-file for the wrong Microarray, and the QA-file will be refused. **The best solution will be to download the latest key file, and re-analyse your chips with QuantArray.**
- If your QA-file contains more coordinates (data lines) than the key file, we will also refuse the file. *This simply means that a new version of the key was not uploaded to the website yet. (Please contact Admin!)*

Delete Cluster (owner or admin)

» MTC_345 ... 2010-Jan-28

- Cluster files are stored for 1 month.
- Press the button below to generate the files again.
- Large clusters can take upto 5 minutes to generate.

Zip all cluster files for download

Regenerate the cluster. e.g. In case of an error.

Start viewing the cluster with TreeView
